# Release Notes

**Bluespring ProcessView 2, SP1: Build 2.1.2607.1057**

Bluespring Software is dedicated to continuously improving their products in order maintain quality assurance and provide valuable software.

This Bluespring ProcessView 2 Release Build includes the following enhanced functionality and resolved issues:

## Enhanced Functionality

| Function Name | Function Description |
| --- | --- |
| Summary Statistics | Allows Users to choose attributes to be displayed on the Map under each Activity Shape.  Users can choose different Attributes for different Activities, so you can customize a Map to summarize the entire Process without needing to investigate each Activity individually. |
| Custom Attributes | All users can add custom attributes to individual shapes utilizing the ProcessView Enter Data feature.  However, only Standard and Professional Users will be able to see the value for a custom attribute in the various ProcessView Reports. |

## Issues Resolved

| Issue Description | Reference Numbers |
|---|---|
| ProcessView forms no longer require the User to save or cancel changes when changes have been made to an activity | 5717 |
| When adding multiple Resources to an Activity, the Resources now appear in both Shape Data and the Resource Tab | 5719 |
| Validation for Duration and Process Time of an Activity working correctly: Duration must be greater than Process Time for all 3 possibilities: Most Likely, Min  and Max | 5723 |
| Complete installation of Custom Reports by double-clicking installation file | 5728 |
| While executing an Analysis Report including inspection for Warnings and Errors, Users can now use the [Continue with Report] button to complete the Report after fixing any errors | 5734 |
| ProcessView Essential Users no longer encounter an error when sorting on fields from Standard or Professional versions within Path Analysis | 5738 |
| When entering Availability (by percent), the value now appears in both Shape Data and the Activity form | 5754 |
| Fixed error in Custom reports under certain environmental conditions | 5762 |
| Fixed an issue using keyboard to select a Resource by name within the Resources tab | 5763 |
| Corrected path error in the stored location for the Outbrief templates | 5770 |
| Fixed error in the Resource Costing rates Activity when no resources have been entered for the ProcessView map | 5784 |
| Fixed error when running a Management Outbrief | 5785 |
| Users are now prompted to provide Administrative access during installation to a machine with User Account Control enabled | 5825 |
| Updated In-Batch Queue Time calculation to use Process Time rather than Cycle Time, as well as incorporate the value of the stations attribute, i.e. the calculation now assumes an arriving batch is spread across multiple stations, instead of waiting at a single station to be depleted. | 5931 |
| Installer automatically validates prerequisites are installed and, if not, installs them prior to completing ProcessView install | 5944 |
| Total Queue Time calculation revised to use only In-Batch Queue or Surge Queue, but not both | 5948 |
